Improving Productivity & Team management with Clockify

Case Study

Best Cybernetics
Nicole Georgogianni
June 2022

One of the effects of the Covid-19 pandemic has been the forced adoption of remote working for many companies, and the consequent issues related to employee monitoring, time keeping, reporting and productivity.

For many companies this has been a 'not-planned' emergency plan from an IT point of view, resulting in an initial rush to implement the minimal conditions to enable time tracking and management.

Best Cybernetics, although an IT company, took advantage of the shared sense of emergency and improved the company culture ad working tools as regards remote working.

In this case study. We will illustrate how our organization incorporated Clockify time tracker and timesheet software to track work hours across projects and improved its business performance.

Summary

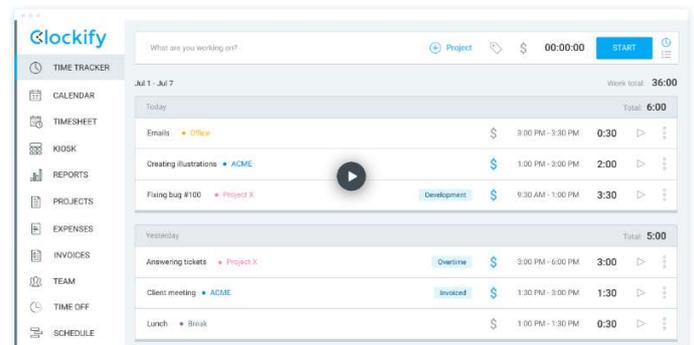

Why Tracking time with Clockify?

- To Boost productivity: Track time spend on activities and improve time management skills of the staff.
- To Manage teams: Inviting our team so they can track time they spend on activities, see who works on what, manage workload, and send attendance data to payroll and accounting.
- To Bill clients: Track billable time, show clients how much we have worked, see how much money we've earned, and create invoices.
- To Analyze business processes. Measure time spent on daily activities to find opportunities for improvements, understand time spent on ad-hoc requests and workload distribution, and improve project efficiency and cost capitalization.

“Clockify has been an essential tool for our team to track time on a daily basis. It allows us to keep a tab on our productivity. It is a simple web-based app where we can track exact hours for each employee and projects, see where inefficiencies are and check how much time is actually spent on different projects to provide better estimates for new customers.”

Nicole Georgogianni, Project Manager

This [short video](#) is about Clockify and how to use it in daily work. At Best Cybernetics we use it constantly as it has improved the performance of our team, and the way in which we can review and assess the tasks, projects and clients.

PRONTO is a project funded by the Erasmus+ programme. PRONTO incorporates best practice project management enabling micro and small businesses to plan and implement high impact business improvement projects.
